# Professional Experience

### COMPANY: CORPORATE TOOLS
### Junior Front End Engineer
Jan 2025 - Feb 2026

- Pushed code daily to GitLab using CI/CD pipelines, and tested and reviewed merge requests through all stages of development.
- Built and maintained WordPress sites on a LEMP stack (Linux, Nginx, MySQL, PHP), using Docker and Devilbox for local and staging environments throughout the full deployment pipeline.
- Technical skills: CI/CD, Git, bash, REST API, Javascript, PHP, Wordpress, Vue, Cursor, Vite, Webpack
- Became a Technical lead of a Product Team
- Led highest-priority project on our highest-traffic site, building a custom ACF block that collects end user input and submits a payload to an API endpoint
- Co-mentored frontend intern in the summer of 2025
- Unofficial Office Creative Director

### COMPANY: 2BARRELS
### Front End Web Developer Intern
Jun 2024 - Aug 2024

- Collaborated with a team of 20+ front end developers to maintain multiple sites within an Agile workflow using 2-week sprint cycles, daily standups, and Jira for ticket tracking
- Technical skills: in SCSS, CSS, Javascript, HTML, Wordpress, Vue 3, and PHP
- Demoed FE Sites Library to stakeholders for adoption as an internal dev resource

### COMPANY: 14FOUR
### Web developer Intern
Jun 2023 - Sep 2023

- Built and maintained client-facing websites using Javascript, HTML, CSS, SCSS, GSAP, Nuxt 2, Vue, Liquid, Shopify, and Squarespace
- Adopted team code standards and file structure conventions from experienced developers for improved code readability and collaboration

# What I'm Proud of

1 of 2 students honored to give Commencement speech for my graduating class of 2025

Top 2% of students to graduate Summa cum laude

1 of 2 students awarded most Outstanding Computer Science student in graduating class of 2025

Top 4% of athletes to get recruited to play college basketball

Only student voted to be Senator of largest college dorm at Whitworth

Top 8% of students awarded the Scholastic art awards silver key for artwork

# Education

Whitworth University
B.A. Computer Science
(Human Computer Interactions)
GPA: 3.96
Graduated: 5/20/25
Code languages used in college
Python Java C++
Assembly SQL React

# Certification

Learn C++ Programming, Abdul Bari

# Located in

Spokane, WA 99202

# Portfolio Projects: https://avadennisportfolio.netlify.app/

### Software Engineer Project: C++: OOD House Generator
github link: https://github.com/aD3nnis/house-generator
Built a procedural floor plan generator in C++ that converts user-defined room counts and square footage into a randomized ASCII grid layout, applying core OOP principles — abstraction, encapsulation, inheritance, and polymorphism — to organize logic across room sizing and placement.

### Frontend Engineer Project: Vue: FE Sites Library
github link: https://github.com/aD3nnis/Frontend-Dev-Resource-Library
A Vue 3 + Vite SPA that displays a searchable, filterable directory of frontend dev resources. Implements search, multi-criteria filters, list/card views, sorting, and pagination using a custom reactive store, Axios, Vue Router, and SASS.

### Full Stack Engineer Project: Stock Tracker
github link: https://github.com/aD3nnis/stonks
Built and deployed a full-stack stock tracking application using a Node.js/Express backend hosted on Render, PostgreSQL database on Neon, REST API integration with LiveCoinWatch, and a React frontend deployed via Netlify.

### Full Stack Engineer Project: Digital Deck (not on portfolio site yet)
github link: https://github.com/aD3nnis/DigitalDeck
A full-stack multiplayer card game built with TypeScript, React, and Next.js on the frontend and Java with Spring Boot on the backend. Implements real-time multiplayer gameplay using WebSockets, with session management, player reconnection handling, and turn-based game logic.

### Software Engineer Project: Python: AI Snake Game
github link: https://github.com/aD3nnis/AI-Class-Project
Python turtle-based Snake game pitting the player against AI-controlled enemies using multiple decision-making strategies, including random movement, max search, and alpha-beta pruning to demonstrate and compare AI behaviors.

### Cloud Engineer Project: AWS: Uptime Monitor (not on portfolio site yet)
github link: https://github.com/aD3nnis/aws-uptime-monitor
Serverless AWS uptime monitor using a Lambda function triggered every 5 minutes to check websites, log response-time metrics to CloudWatch, and send SNS email alerts when a site is down or slow.
